

OPERATIONAL PERFORMANCE VERIFICATION®

Why Us?

Pro-MEC Engineering Services, Inc. Operational Performance Verification (OPV®) field service program provides quantitative performance evaluation of your facility's operational systems. We offer weekly, monthly, quarterly, bi-annual, and annual inspection contracts to ensure your system is operating at it's optimized design parameters.

What We Do:

By utilizing our OPV® program, you will receive support to your Reliability Centered Maintenance and Total Productive Maintenance programs, allowing you to have the right mix of strategies to keep your equipment in working order for its operational life expectancy.

OPV® Options:

- *Customized approach*
- *General field services*
- *Regularly scheduled preventative maintenance visits*
- *24-hour emergency and troubleshooting services*
- *BlueBox remote data collection system*

Would You Like Instant Data?

Our BlueBox data collection system can be added on to your OPV® to provide constant analysis of your operation systems. With the power of this data, your system can be compared to original design parameters in an instant!

How Does OPV® Work?

A highly trained technician will begin by completing an assessment of your system, comparing it to original design parameters. The technician will provide a detailed report of the findings and suggestions to bring the system up to design parameters and a PM schedule to keep it running at peak efficiency. From there, a customized program will be developed to keep your systems running at optimal design parameters!
