

FIRE INDUSTRY

Why Us?

Unlike other companies, the internal design and engineering department of Pro-MEC Engineering Services, Inc. can custom build a tank to fit your needs, vehicle shape, and project goals. The limit is only your needs as we can add options such as T-mounts, custom doors, tanks and more!

What We Do:

Pro-MEC Engineering Services, Inc. specializes in thermoplastic fabrication and uses virgin copolymer Polypropylene to create a durable, lightweight, rust and corrosion free tank, body, or skid unit. We adhere to NFPA 1901 standards for automotive fire apparatus and our welds are handcrafted, inspected, and certified according to the rigorous German DVS standards.

Integrated Fire Truck Tanks and Bodies

Skid Units

Designed for smaller brush fire applications, these custom designed tanks can be fabricated to be installed in the bed of a pickup truck, on UTVs or ATVs, or other small vehicles.
